chameleon™ Food Safety Sensors

Delivering Operational Efficiency and Excellence

More VALUE

Smart Data
Temperatures are collected and stored in the cloud for future use; they are also used in trend graphs.

Better Performance
Alerts notify you immediately when temperatures are not being met, allowing you to take action and reduce food loss.

Alerts and Alarms
Notifications via text and email are sent immediately when areas fall below or go above set temperature.

Custom Reporting
HACCP reporting can be branded and customized to your brand to meet corporate standards.

More EFFICIENT

The chameleon temperature sensor kits ensure your data gets to you the times you need it most. Remotely monitor and access retrospective temperatures for all of your restaurant's critical areas like reach in coolers and food prep areas.

Always ACCURATE

The chameleon temperature sensor measures the ambient temperature in fixed intervals with an accuracy of 0.54 °F.

Continuous temperature measurements captured every minute to provide you with the most accurate readings.
